Research interests

I am broadly interested in the optimization problems of **deep learning**. During my PhD, I worked on the training problem of **sparse deep neural networks** and one of its simplified (but already involved) version - **sparse matrix factorization**. My postdoctoral research continues this theme but it engages with a broader set of (deep learning) models. My primary objectives are:

- **Accelerate** current algorithms to train (sparse) neural networks.
- Develop a **mathematical framework** to understand the **optimization, generalization, and limitation** of neural networks.
